# ADVISORY CIRCULAR

GUIDE FOR DEVELOPING AND EVALUATING REPAIR STATION

INSPECTION PROCEDURES MANUALS

DEPARTMENT OF TRANSPORTATION  
Federal Aviation Administration  
Washington, D.C.

DATE 2/13/81

# ADVISORY CIRCULAR

DEPARTMENT OF TRANSPORTATION  
Federal Aviation Administration  
Washington, D.C.

---

**Subject:** GUIDE FOR DEVELOPING AND EVALUATING REPAIR STATION  
INSPECTION PROCEDURES MANUALS

1. PURPOSE. This advisory circular (AC) provides information for developing and evaluating a repair station inspection procedures manual. This information sets forth an acceptable means, but not the only means, of complying with referenced regulations.
2. RELATED FEDERAL AVIATION REGULATIONS (FAR). FAR Parts 43, 91, 121, 125, 127, 135 and 145.
3. BACKGROUND. The development of a repair station inspection procedures manual that adequately covers all pertinent FAR and the repair station's inspection system has proven to be a time-consuming task for the operator and the Federal Aviation Administration. This guide was developed to reduce that time and to provide a standardized format that may be used to develop a manual that contains a repair station's inspection procedures.
4. DISCUSSION. This document is intended for use as a guide for the development and evaluation of the repair station's inspection procedures manual required by FAR Section 145.11(a)(2) and Section 145.45(f).

a. This guide is not intended to provide a complete sample inspection procedures manual for all repair stations. "Examples" in Appendix 1 are intended to illustrate a requirement related to the FAR. Each inspection procedures manual should be developed within the ratings authorized and the size and complexity of the station. It is important to note that the inspection procedures in the manual are necessary for a satisfactory quality control system, and those procedures should be designed for use by the repair station to satisfactorily perform under its rating(s). In that regard, a repair station with a Limited Specialized Service Rating for Nondestructive Testing would have a different inspection system criteria than a repair station with a Class 3 Airframe Rating. Material is included in portions of this document which may not directly relate to or be required by a referenced

2/13/81

FAR. However, that material is considered to be valuable as a part of a system for repair station management and illustrates integration of the required inspection procedures and other FAR Part 145 requirements into such a system.

b. A complete inspection procedures manual should at least:

- (1) Satisfy the minimum requirements of the FAR.
- (2) Accurately describe the repair station operations as related to its ratings.

c. The repair station manual content requirements are outlined in FAR Section 145.45(f) and Section 145.51(d)(3). The following is a brief outline of those manual requirements:

- (1) Detailed explanation of the repair station's inspection system.
- (2) Details for the continuity of inspection responsibility.
- (3) Detailed system of inspecting incoming material.
- (4) Detailed system of preliminary inspection.
- (5) Detailed system for hidden damage inspection.
- (6) Reference to manufacturer's inspection standards for a particular article when applicable or necessary.
- (7) Sample of inspection forms and the method of their execution or reference to a document in the forms manual.
- (8) Methods and procedures for training inspection personnel.
- (9) Approved procedures governing work performed outside the repair station.
- (10) Procedures for acceptance of work performed by other facilities.
- (11) If applicable, procedures for work performed for air carriers (FAR Section 145.2).

d. An air carrier with an FAA approved repair station rating(s) may make its repair station's inspection procedures manual a part of its air carrier manual provided all of the manual requirements of FAR Part 145 are satisfied.

  
Joseph A. Pontecorvo  
Acting Director of Airworthiness

(NAME OF COMPANY)  
REPAIR STATION - INSPECTION PROCEDURES MANUAL

Title: Introduction  
 Page No: i  
 Issue Date: 7/1/78

This inspection procedures manual has been prepared in accordance with the current Federal Aviation Regulations (FAR) and the policies of (insert name of company).

This manual explains the internal inspection system in detail, including the continuity of inspection responsibility. It gives samples of inspection forms used and their method of execution. The manual gives a detailed explanation of the following portions of the inspection system: incoming materials, preliminary inspection, hidden damage, inspection continuity and final inspection of the article being maintained or altered at this facility.

The general repair, overhaul or alteration of products will be performed in accordance with the current Federal Aviation Regulations, manufacturer's data, drawings, specifications and bulletins, or other technical data approved by the Administrator for the particular (insert appropriate rating(s) or limited rating(s) airframe, engine, propeller or appliance). Limited rating specialized service for (insert appropriate rating) will be performed in accordance with the procedures outlined in the (insert name of company) Process Specification (insert number) approved by the Federal Aviation Administration (FAA) dated (insert date approved by FAA).

This repair station will not maintain or alter any item for which it is not rated, and will not maintain or alter any article for which it is rated if it requires technical data, equipment, materials, facilities or trained personnel that are not available. (FAR 145.53).

The technical library and this inspection procedures manual, required for operation of this repair station, will be maintained in a current status at all times.

Each supervisor and inspector working for this repair station will have a current copy of this manual and should thoroughly understand its contents. It will also be available to other repair station personnel.

Note: (If applicable) include the following: The performance of any maintenance, preventive maintenance, alteration or required inspections for an air carrier or commercial operator having a continuous airworthiness program under FAR Part 121, 125, 127, or 135, will be performed in accordance with the requirements of FAR Part 145, Section 145.2

APPROVED: J. M. Bono  
 General Manager

<u>(NAME OF COMPANY)</u> <u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u>	
Title: Manual Control Page No: 11 Issue Date 7/1/78	
<p>Each manual will have a control number and an assignment entry on the manual cover page. A master list containing the manual number, location and revision status will be kept in the general manager's office.</p> <p>The general manager will obtain from the chief inspector and each shop supervisor once each month a manual status report. This report will either confirm that the manual is still current and valid for that department's use, or will identify needed changes.</p> <p>A follow-up file will be maintained in the general manager's office showing, on a continuous basis, the disposition of each needed change which is identified.</p> <p>The general manager will have those revisions he finds necessary produced in a final form for coordination with the FAA General Aviation District Office at (insert location). Each page of the manual and revision thereto will be approved by the general manager. Upon acceptance by FAA, sufficient copies will be made and distributed to provide revision pages for each manual holder.</p> <p>Upon receipt of a revision, each manual holder will be responsible for inserting the revised pages in its manual, record the revision on the manual's record of revision page and return the acknowledgment form (provided with the revision) to the general manager showing the holder has revised its manual.</p> <p>A list of effective pages will be issued with each revision so each manual can be checked and kept current.</p>	
<p>APPROVED: <u>J. M. Braco</u> General Manager</p>

HOUSING AND FACILITIES

2/13/81

FIGURE 8. HOUSING AND FACILITIES DESCRIPTION PAGE.

Reference: FAR Section 145.35(a) through (h) and FAR Section 145.37(a) through (f). This page should contain a description of the type of buildings, facilities and type of construction. Include type of floors, heating, lighting, natural light, electrical and compressed air outlets. Other special requirements applicable to spray painting, airframe or engine ratings, instrument, radio and propeller ratings, should be covered on this page. Total area (in square feet) should be given.

NOTE: (Ref. FAR Section 145.21). Any changes to the location or in its housing and facility must be approved in writing by the local Flight Standards District Office.

(NAME OF COMPANY)  
REPAIR STATION - INSPECTION PROCEDURES MANUAL

Section: I  
Page No: 1  
Title: Housing and Facilities  
Issue Date: 7/1/78

The (insert name of company) FAA Certificated Repair Station No. (insert) is completely housed in an all steel semicantilever two bay hangar with attached offices, stockroom, and shops with the following:

69,000 Square feet of hangar floor space  
1,183 Square feet of office space  
2,662 Square feet of stockroom floor space  
2,581 Square feet of shop space

All floors are constructed of reinforced concrete with asphalt tile overlay in the offices and shops.

All office and shop spaces are lighted with fluorescent light fixtures. All hangar bays are lighted with approximately 50 explosion proof 750 watt lamp assemblies. 220 Volt-30 amp and 110 Volt-20 amp circuits are available in hangar and shop areas.

Hangar has four doors, each 50' wide, two to each of the hangar's two bays. The doors, when open have all overhead clearance of 38'6" and leave a 100' opening the full length of each hangar bay. Doors can be operated manually or electrically.

Traveling hoists are located on the beams of the hangar, servicing the entire floor space. The entire hangar, offices, stockroom and shops are protected with a fire alarm and sprinkler system. The ramp in front of the hangar is concrete and is lighted by floodlights at night.

A 90 PSI/60 CFM electric driven air compressor supplies filtered compressed air to wall outlets equipped with moisture traps at convenient locations in hangar and shop areas.

Hangar is heated by a central boiler room blowing hot air through ducts and overhead blowers. The offices, stockroom, and shops are heated through hot air ducts.

**FIGURE 12. AUTHORITY AND ROSTER OF AUTHORIZED INSPECTION PERSONNEL.**

**Reference:** FAR Section 145.43(a)(2). This information is not required by regulation to be kept in this manual but is required to be available in the repair station. It is recommended that this information be kept in the repair station only, so a revision to the list would not require a revision of the manual. If a repair station finds it advantageous, the information may be included in this part of the manual. In either case, it should include the name of the chief inspector, all inspection personnel and identify those inspectors who make final quality determination before approval for return to service. It should include all authorized signatures for "Return to Service" and indicate the area of responsibility of each person.

**NOTE 1:** A space should be provided opposite each name for their signature. If work is performed in accordance with FAR Section 145.2, required inspection personnel should be designated as required by Subpart L of FAR Part 121, Subpart G of FAR Part 125, Subpart I of FAR Part 127 and Subpart J of FAR Part 135. Training records are required to be maintained on each individual to show compliance with FAR Section 145.39(e).

**NOTE 2:** No person may perform a required inspection on work covered by Section 145.2 if that person performed the item of work to be inspected.

AUTHORITY DELEGATION (CONTINUED)

For a complete list of duties, see Chief Inspector's duties.

The inspector will signify acceptance of work performed by stamping the appropriate box on the work order or inspection form along with the date the work is accepted.

Log book entries, inspection forms, and FAA forms must be signed using full name and in ink by the inspector completing the inspection.

A master list shall be maintained with each inspector's full name, initials and stamp in this section of the repair station manual (or in the repair station as applicable). A stamp issued to an inspector will be destroyed when an inspector no longer acts as a member of the inspection department, and that number will not be reissued.

All inspectors are authorized to return to service aircraft and/or component for which the repair station is rated after annual inspection, major alteration or major repairs have been completed.

APPROVED: J. M. Suro  
General Manager

**FIGURE 14. TRAINING INFORMATION**

Reference: FAR Section 145.39(e) and Section 145.45. This page should identify what methods are to be used. The records should reflect the methods, type, length of training, where and when it was received. The records should be kept current.

FIGURE 15. EMPLOYMENT SUMMARY

Reference: FAR Section 145.43(b) (1) through (5). This information is not required by regulation to be kept in this manual, but is required to be available in the repair station, it is suggested that this information not be made part of this manual so that a revision to the list would not require a revision to the manual. A company who desires, may include it in its manual. In either case, a separate summary is required for each person that is listed in Section II, Pages 1 & 2. It should contain the information as shown on the sample for each person to show compliance with the regulations.

NOTE 1: It should be in the format of the referenced regulation.

NOTE 2: It is recommended that space be provided at the end of each summary for the individual's signature.

NOTE 3: This summary is required to be maintained in accordance with Section 145.43(c) through (e).

GENERAL MANAGER

The general manager is responsible to the vice president of technical services for the complete overall operations of the repair station, including the adequate housing and facilities and the continued maintenance thereof. In addition the general manager is also responsible:

For providing adequate training, equipment, materials and competent personnel pertinent to the operations of the repair station in order that it may comply with all applicable Federal Aviation Regulations (FAR) and manufacturer's recommendations.

To ascertain that adequate fire fighting equipment is available at the repair station.

To establish standards to ascertain that adequate safety precautions are observed.

To establish procedures to determine the need for original and recurrent training of personnel consistent with the work to be performed. Establish liaison with air carriers respecting applicable FAR requirements, when work for air carriers is to be performed.

In the absence of a maintenance manager or chief inspector the general manager assumes the responsibilities and delegates authority to qualified personnel as dictated by FAR Part 145 and FAR Part 43, to release aircraft for service after repair or inspections.

The general manager may delegate all duties assigned to any qualified assistant as necessary however, such delegation does not relieve the general manager of the overall responsibilities.

APPROVED: J. M. Boro  
General Manager

CHIEF INSPECTOR

The chief inspector is responsible to the general manager for the overall operation of the inspection department and, as such, will have the final authority in the releasing to service of airframes, engines, propellers, appliances and the component parts thereof. In addition, the inspector is responsible for directing, planning and laying out the details of inspection standards, methods and procedures used by the repair station in complying with all applicable Federal Aviation Regulations, manufacturer's specifications and recommendations.

It is the chief inspector's duty to:

1. Assist, supervise and direct all personnel assigned to the inspection department.
2. Ascertain that all inspections are properly performed on all completed work and that the proper inspection records, reports and forms used by the repair station are properly executed prior to releasing the product for return to service.
3. Maintain and keep current a file of pertinent Federal Aviation Regulations, specifications, type certification data sheets, and airworthiness directives.
4. Determine that all technical data on all articles overhauled or repaired by the repair station are secured and kept current with latest revisions by the respective department inspectors. This data will include repair station's process specification for limited rating specialized services, manufacturer's overhaul manuals, service bulletins, part specifications, related Federal Aviation Administration approved data and other technical data used by the repair station. In addition, assure that all military technical orders used in the overhaul and repair of components have been evaluated and approved by the FAA.

APPROVED: J. M. Goo  
General Manager

CHIEF INSPECTOR (CONTINUED)

5. Assure that periodic checks are made on all inspection tools and the calibration of precision test equipment used by the repair station and mechanics who have their own precision equipment. Further assure that a current record of those inspections and test is maintained.
6. Determine that no defective, unserviceable, or unairworthy parts are installed in any component or articles released by the repair station.
7. Submit reports of defects of unairworthy condition in accordance with FAR 145.63.
8. Assure the proper execution of FAA Form 337 when required, and/or a maintenance release.
9. Accomplish the final acceptance of all incoming material, including new parts, supplies and the airworthiness of articles on which work has been performed outside the repair station by contract.
10. Conduct the preliminary, hidden damage, in-progress, and final inspection of all articles processed by the repair station and record results as outlined in this manual.
11. Oversee the proper tagging and identification of all parts and components as outlined in this manual.
12. Provide for continuity of inspection responsibility, assuring completion of required inspection when personnel shift or assignment changes occur.

APPROVED: J. M. Bono  
General Manager

CHIEF INSPECTOR (CONTINUED)

13. See that rejected and unserviceable parts are handled in such a way as to prevent their reuse as serviceable parts.

14. Ascertain that all inspections are properly performed on all completed work before it is approved for return to service, and that the proper inspection and maintenance records, reports, and forms required for such release are properly executed.

15. Maintain files of completed work orders and inspection forms in such a manner that the file pertaining to a specific item repaired can be readily located for review.

16. Inspect all radio work that requires the qualification of an A&P mechanic, such as airframe structures, airframe electrical wiring, and weight and balance.

Note: The chief inspector may delegate all duties assigned to any qualified assistant as necessary, however, such delegation does not relieve the chief inspector of the overall responsibilities.

APPROVED: J. M. Bono  
General manager

MAINTENANCE MANAGER

The maintenance manager is responsible to the general manager for the operation of the repair station.

In addition, the maintenance manager is responsible for:

1. Training and assisting subordinates in the proper work procedures and practices to be followed.
2. Maintaining all hangar and shop equipment and tools in a serviceable working condition, assuring that periodic checks and calibrations are made on special tools and test equipment, and that current records are maintained of those tests and calibrations.
3. Ascertaining that all necessary maintenance entries on maintenance forms and work orders used by the repair station are properly executed by the responsible mechanics.
4. Maintaining the premises of the repair station in a clean and orderly manner.
5. Initiating purchase requisitions for stock as required.
6. Assuring that the personnel in the maintenance department do quality work.
7. Conducting periodic drills for the purpose of indoctrinating personnel in the proper use and location of fire fighting equipment, and checking the equipment periodically for serviceability and adequacy.

APPROVED: J. M. Bono  
General Manager

AVIONICS MANAGER

The avionics manager is responsible to the general manager for the overall operation of the avionics department.

In addition, the avionics manager is responsible for:

1. The planning, direction and coordination of activities within the department, and the planning of its activities in conjunction with other departments, as required.
2. Assuring that the repair and overhaul of all articles and components within the avionics manager jurisdiction is accomplished within the authority of the repair station and that the work is inspected by the inspection department.
3. Training and assisting subordinates in the proper work procedures and practices to be followed.
4. Making available to the avionics department the required technical data on all articles overhauled or repaired by the avionics department and keeping the data current with latest revisions. The data will include manufacturers' overhaul manuals, service bulletins, parts specifications, related Federal Aviation Administration approved data and any other technical data used.
5. The maintenance of all avionics department equipment and tools in a serviceable working condition, assuring that periodic checks and calibration are made on test equipment and that current records are maintained of those tests and calibrations.
6. Ascertaining that all necessary maintenance entries on maintenance forms and work orders used by the repair station are properly executed by the responsible technicians.
7. The quality of work performed by the personnel in the department.

STOCKROOM MANAGER

The stockroom manager is responsible to the general manager for the operation of the stockroom.

In addition, the stockroom manager is responsible:

For identifying, controlling, segregating, and maintaining all stock and tools to a serviceable or unserviceable category as designated by the chief inspector.

For the preservation of all articles or parts, while carried in inventory, including parts that are subject to deterioration and shelf-life specifications.

For controlling the inventory.

For distributing to all pertinent departments any miscellaneous technical information, etc., which is received by the stockroom.

For ascertaining that a sufficient supply of fire fighting and safety equipment is provided for use at fire stations in hangars, shops, ramps, and vehicles and for their replacement after use.

The stockroom manager may delegate to any qualified assistant as necessary, however, such delegation does not relieve the stockroom manager of the overall responsibilities.

Title: Inspection System  
Issue Date: 7/1/78

INSPECTION SYSTEM

GENERAL

The chief inspector is responsible to the general manager for full compliance with all procedures outlined in this system as appropriate to any item being inspected, repaired, overhauled or altered by the repair station. The airworthiness of those items and compliance with record requirements of the operators of those items and of the repair station, depends upon conformity to the procedures of this system.

INSPECTION PERSONNEL

Inspection personnel are required to be thoroughly familiar with all inspection methods, techniques and equipment used in their area of responsibility to determine the quality of airworthiness of an article undergoing maintenance, repair or alterations. All personnel must also maintain proficiency in the use of the various types of inspection aids to be used for inspection of the particular items undergoing inspection. Available to all inspection personnel are current specifications involving inspection tolerances, limits, and procedures as set forth by manufacturer of the product undergoing inspection and other forms of inspection information such as FAA airworthiness directives, manufacturers bulletins, etc. A file of maintenance manuals, engineering letters, service letters, FAA regulations, etc., are maintained in the inspection office.

Inspection personnel assigned to repair station operations are required to familiarize themselves with FAA regulations applicable to such operations with particular emphasis on the following:

FAR Part 21 - Certification Procedures For Products And Parts

FAR Part 23 - Airworthiness Standards: Normal, Utility And Acrobatic Category Airplanes

FAR Part 25 - Airworthiness Standards: Transport Category Airplanes

FAR Part 39 - Airworthiness Directives

INSPECTION PERSONNEL (CONTINUED)

FAR Part 43 - Maintenance, Preventive Maintenance, Rebuilding and Alteration

FAR Part 45 - Identification And Registration Marking

FAR Part 65 - Certification: Airmen Other Than Flight Crewmembers

FAR Part 91 - General Operating And Flight Rules

FAR Part 145 - Repair Stations

FAR Part 121 - Certification and Operations: Domestic, Flag, and Supplemental Air Carriers and Commercial Operators of Large Aircraft

FAR Part 125 Certification and Operation Rules for Certain Large Airplanes

FAR Part 135 - Air Taxi Operators And Commercial Operators

INSPECTORS, MECHANICS AND SUPERVISORS

All supervisors, inspectors and mechanics are required to be thoroughly familiar with the requirements of this manual, FAA regulations, airworthiness directives and advisory circulars, manufacturers service letters and bulletins and engineering orders. The basic inspection system requires mechanics to sign their last name for work performed by them prior to submitting the item to inspectors for final acceptance. Inspectors will indicate their acceptance of work performed with the application of the inspector's acceptance stamp next to the item on the work forms. See Section VI of this manual for sample forms and instructions for their use.

**FIGURE 24. INSPECTION CONTINUITY**

Reference: FAR Sections 145.45(f) and 145.61. This section should show by title, who performs the inspection, the forms to be used, and disposition of the records. The inspection continuity should encompass incoming materials, preliminary hidden damage and final inspection where applicable. It should include items as they progress through various stages of repair, overhaul or modification, including other inspections, test and calibrations (Rockwell Hardness Test, Magnflux, Ultrasonic X-ray, etc.), adjusting or calibrating VOR, DME or ILS equipment. It should establish a system for passing along the continuity of inspection and other maintenance from one shift or person to another. It should reference manufacturer's inspection standards for the maintenance of the particular items.

<p style="text-align: center;"><u>(NAME OF COMPANY)</u> <u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u></p> <p style="text-align: right;">Section: V Page No: 3 Title: Inspection System Issue Date: 7/1/78</p> <p><u>CONTINUITY OF INSPECTION RESPONSIBILITY</u></p> <p>Through a "Line of Succession" list maintained by the chief inspector, his duties are assured of performance as "Acting Chief Inspector."</p> <p>A status book will be provided in the hangar and each shop in which a status report will be left by each of the inspectors leaving the job before completion of a project, for information to the succeeding inspector. Its purpose is to assure a continuing inspection responsibility for in-progress work inspections.</p> <p>All forms upon which work performed is listed have been designed to show the name of the mechanic, or repairman who performs the work (or supervises it) and the name of the inspector inspecting that work.</p> <p>A project involving work other than inspection only, <u>may not be approved for return to service unless it has been cleared by the chief inspector as satisfying the requirements of FAR 145.61, and 145.59(a).</u></p> <p>Samples of work forms, inspection forms, and instructions for completing them, are contained in Section VI of this manual.</p> <p>APPROVED: <u>J. ---

**FIGURE 25. INCOMING MATERIALS**

Reference: FAR Section 145.45(c). This section should explain how compliance is shown, how the inspections are recorded, classification of incoming materials, including checks for damage, preservation and shelf-life, identification of parts by part number, and the person responsible to perform the inspection (by title). In addition, it should describe the action to be taken when materials received do not meet specifications.

<u>(NAME OF COMPANY)</u> <u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u>	
Section: V Page No: 4 Title: Inspection System Issue Date: 7/1/78	
<u>PARTS RECEIVING POLICY</u>	
<p>The chief inspector of the repair station (or designee) is responsible to see that all incoming materials, AN or MS and other hardware, parts, component, equipment and other products procured for use by the repair station are subject to receiving inspection to assure conformance to part number, purchase order and/or other applicable specifications. A record of such inspections will be recorded on repair station Form No. 214, Receiving Inspection. Any products that fail to meet applicable specifications will be red tagged as unserviceable, listing the discrepancy and be returned to the stockroom manager for return to vendor. To preclude those parts from being used, the stockroom manager will place such items in the locked holding area until they are repacked for shipping back to the vendor.</p>	
<u>GENERAL TEST REQUIREMENTS:</u>	
<ol style="list-style-type: none"><li>1. New components manufactured under a type or production certificate, or in accordance with a Technical Standard Order (or similar FAA approved technical data), or components which have been rebuilt by the manufacturer to production specifications, require a visual receiving inspection.</li><li>2. Any repaired or overhauled components received from an FAA certificated repair station do not normally require more than a visual receiving inspection before being returned to service. Repaired or overhauled components that are received from other than an FAA certified repair station, in addition to the normal receiving inspection, will be functionally checked before being returned to service.</li><li>3. All components requiring a functional check are routed to the proper repair station shop for the accomplishment of this check.</li></ol>	
<p><u>NOTE:</u> Functional checks are performed in accordance with instructions contained in the appropriate manufacturer's publications. However, if such specific instructions are not available, functional check requirements will be determined by the chief inspector, and issued on a form to provide a means of recording compliance therewith.</p>

Title: Inspection System  
Issue Date: 7/1/78

PARTS RECEIVING POLICY (CONTINUED)

NOTE: Functional checks are performed in accordance with instructions contained in the appropriate manufacturer's publications. However, if such specific instructions are not available, functional check requirements will be determined by the chief inspector, and issued on a form to provide a means of recording compliance therewith. If suitable test facilities are not available in repair station, components may be functionally checked in the aircraft. In any case, all functional checks must be monitored and recorded by the chief inspector or designee.

4. The Supervisor - Quality Control may request a functional check of any component overhauled or repaired by any agency, when of the opinion that such a check is required in order to return the component to service.

5. All adhesives, sealers, primers, finishing and other materials having limited shelf-life are identified by material control labels showing the expiration date of the shelf-life as established by applicable specifications. Inspectors and mechanics will dispose of any materials found in the shop or store rooms without such identification or with expired shelf-life.

6. The detailed functions of material inspection are covered by the manufacturer's quality assurance directive and inspection bulletins which will be used to implement the operation of the repair station with respect to the control and identification of materials, parts and equipment received for direct use in the repair station. All parts new or overhauled purchased from vendors will be checked for proper approval documentation prior to release for installation by the repair station.

**FIGURE 26. WORK ORDER**

Reference: FAR Section 145.61. The work order should have an identification number, show the name of the repair station, address and the FAA assigned repair station number. It should show the customers name and address, complete identification of the items worked on, detailed instructions for work to be accomplished and space or reference instructions for work to be accomplished. For the work accomplished sign off space for mechanics and inspector. And instructions for sign off of work as acceptable to the company.

<p>(NAME OF COMPANY)</p> <p><u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u></p>	
<p>Section: V Page No: 6 Title: Inspection System Issue Date: 7/1/78</p>	
<p><u>WORK ORDER</u></p> <p>Upon receipt of a work request for maintenance or alteration on an airframe, engine, accessory, propeller, instrument, radio or a product requiring a specialized service covered by the repair station certificate, the maintenance department will issue a (name of company) Repair Station Work Order Form 1234 to authorize that work to be accomplished. The form is prenumbered and that number will be the basic reference for the product's maintenance record. The work order will specify the work to be accomplished. The work order will be supplemented as necessary with detailed inspection instructions along with applicable forms, to assure proper inspection and repair of the unit involved. The number of additional forms used will be identified on the work order. The original of the printed and numbered work order form will be retained in the maintenance manager's office.</p> <p>A logbook will be maintained in the maintenance manager's office for recording each work order in numerical order, identifying the customer, the product for which it was issued along with the manufacturer serial number, special instructions and the work accomplished.</p> <p>It will be the responsibility of the respective shop manager and chief inspector to assure that proper supplemental instructions are furnished to assure proper progressive servicing, inspection and testing of the product involved.</p> <p>Mechanics will enter work accomplished and use last names to sign off that work on the form. Inspectors will use their inspection stamp to sign off inspections. A list of inspectors and stamp numbers are contained in this manual under Section II, Page 2.</p> <p>See copy of work order and supplemental forms in Section VI of this manual.</p> <p>APPROVED: <u>J. M. Brad</u> General Manager</p>

Section. V  
Page No: 9  
Title: Inspection System  
Issue Date: 7/1/78

INSPECTION FOR HIDDEN DAMAGE

The preliminary inspection is not limited to the area of obvious damage or deterioration but includes a thorough and searching inspection for hidden damage in areas adjacent to the damaged area and/or in the case of deterioration, a thorough review of all similar materials or equipment in a given system or structural area. The scope of this inspection will be governed by the type of unit involved with special consideration accorded previous operating history, Malfunction or Defect Reports, service bulletins and AD notes applicable to the unit involved. The inspector is responsible for listing all discrepancies noted during inspection on the work order prior to release for return to service. See Section VI of this manual for proper forms and instructions for using them.

FIGURE 30. RECORD OF INSPECTION (CONTINUED)

(NAME OF COMPANY)

REPAIR STATION - INSPECTION PROCEDURES MANUALSection: V  
Page No: 12  
Title: Inspection System  
Issue Date: 7/1/78MAINTENANCE INSPECTION-

One-hundred hour and progressive inspections, inspections of amateur built aircraft and aircraft on FAR Section 91.217 programs will be accomplished in accordance with the inspection cards or inspection schedule provided for each specific model aircraft. The inspection paperwork will be supplemented as necessary to cover items to be replaced for time, special inspection items, discrepancies and airworthiness directives. All 100-hour and annual inspection paperwork will comply with FAR Part 43 Appendix D.

No aircraft will be returned to service following an inspection as outlined above until all discrepancies affecting airworthiness have been corrected.

Maintenance supervisors are responsible for screening completed work orders covering work performed in their assigned area to assure that all items on the work order have been cleared, that there are no open discrepancies and that all major work accomplished is covered by approved data. Inspection will recheck to assure compliance with this section.

After work orders have been screened for completeness and accuracy, they are routed to the maintenance manager's office. Such inspection and work records will be retained in active file for a period of not less than two years (as required by FAR Part 145) and then transferred to dead storage for 5 additional years.

CONTINUITY OF MAINTENANCE RESPONSIBILITY

A status book will be provided in the hangar and each shop in which a status report will be entered by each of the lead mechanics informing the next shift of the status of each job not completed. Its purpose is to assure a continuing maintenance responsibility for work in progress.

APPROVED: *J. M. Boas*  
General Manager

FIGURE 31. HANDLING OF PARTS

Reference: FAR Sections 145.35, 145.35(a)(3), 145.35(d) 145.35(a)(4) and 145.35(e). This section should explain compliance with the rule.

Processing of parts, identification, tag, segregation, protection from damage and/or contamination, parts finishing, preservation, stock control and shelf-life.

<p>(NAME OF COMPANY)</p> <p><u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u></p>	
<p>Section: V Page No: 13 Title: Inspection System Issue Date: 7/1/78</p>	
<p><u>HANDLING OF PARTS</u></p> <p>All items or components undergoing maintenance, repairs and/or alterations in the repair station shall have the component parts segregated and in containers in order to assure that all parts of the same unit(s) are kept together. Suitable trays, racks, stands and protective coverings (as required) are to be provided in shop areas to ensure maximum protection of all parts. Rejected parts will be identified by the use of a red reject tag and final disposition will be the responsibility of the Supervisor - Quality Control.</p>	
<p><u>TAGGING AND IDENTIFICATION OF PARTS</u></p> <p>The following is our four (4) tag system:</p> <p><u>White tag</u> - Used for identification of unit and customer only. To be completed by shop supervisor or a designated employee.</p> <p><u>Green tag</u> - Will be attached to units or parts requiring repairs or test and will include work to be performed. To be executed and signed by inspector only.</p> <p><u>Yellow tag</u> - To be attached to completed units which have received final inspection and are approved for return to service. The maintenance release is printed or stamped on the reverse side of this tag. (See Maintenance Release Statement, Section V, Page 21). This release will be signed by a designated person only.</p> <p><u>Red tag</u> - Will be attached to rejected parts, pending final disposition. If rejected parts are in large quantities, they can be placed in a special container marked "rejected parts." This tag to be completed by an inspector.</p>	
<p>APPROVED: <u>J.M. Boes</u> General Manager</p>	

FIGURE 31. HANDLING OF PARTS (CONTINUED)

<u>(NAME OF COMPANY)</u> <u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u>	
Section: V Page No: 14 Title: Inspection System Issue Date: 7/1/78	
<u>HANDLING OF PARTS (CONTINUED)</u>	
All tags contain the following information:	
Manufacturer - model - part number - serial number - name of part - owner.	
The yellow tag will remain attached to the parts returned to the customer.	
The red, white and green tags will be made a part of the work order file. If the rejected part is returned to the customer, the red tag will remain attached and a record will be made on the work order showing the part was returned to the customer.	
<u>PART FINISHING</u>	
Painting and spraying is accomplished in an area segregated from the assembly areas.	
<u>PRESERVATION OF PARTS</u>	
Components are preserved in accordance with manufacturer's recommendations or other acceptable industry standards. To afford protection against humidity, extreme temperatures, dust, rough handling or other damage, the component will be preserved by wrapping in suitable containers, plastic bags, and/or rigid boxes containing suitable shock absorption material.	
Storage of "Repair Station" preserved components will be accomplished by storing in a separate "Repair Station" location maintained by the "Stores" department. The location should provide maximum protection from physical damage. (Expand as necessary the preservation and storage requirements to suit the products worked on under the repair station ratings.)	
<u>SHELF LIFE</u>	
For those items having a specific shelf life, Repair Station Form 2468 is completed by the receiving inspector during the first ten (10) calendar days of each month.	
Components or parts that have exceeded allowable shelf life limits will be red tagged (Condemned) and will be forwarded to the Supervisor, Quality Control for final disposition.	
APPROVED: <u>J. M. Bono</u> General Manager

Issue Date: 7/1/78

INCOMING MATERIAL

All incoming material shall be inspected for quantity, quality, conformity to dimensions or specifications and state of preservation. At this time the cure date of material having shelf life shall be noted, and the older stock shall be used first provided it is not beyond manufacturer's specifications.

HARDWARE AND EQUIPMENT STORAGE

The Stockroom Manager is responsible to the General Manager for the operation of the stockroom and is responsible for controlling, segregating and maintaining all stock and tools as to a serviceable or unserviceable category approved by the Chief Inspector.

In addition the Stockroom manager is required to:

Properly store, segregate and protect materials, parts and supplies.

Provide suitable storage facilities for storing standard parts, spare parts and assure that raw materials are separated from shop and working space.

Provide for the preservation of all articles or parts, while in inventory, that are subject to deterioration and shelf-life specifications.

Only acceptable parts and supplies will be issued for any job. Acceptable industry practices shall be followed for the proper protection and storage of materials. (The standards for use by the repair station should be detailed here.)

APPROVED: J. M. Boes  
General Manager

FIGURE 32. RECORD OF TEST AND/OR CALIBRATION. This section should include in-house tests applicable to the repair station ratings and those contracted to outside agencies. It should include a requirement for the signature of the mechanic and/or inspector as appropriate. The record should identify the article by serial number or company assigned number.

<p style="text-align: center;">(NAME OF COMPANY) <u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u></p> <p style="text-align: right;">Section: V Page No: 16 Title: Inspection System Issue Date: 7/1/78</p> <p><u>RECORD OF SPECIALIZED INSPECTION, TEST AND/OR CALIBRATION</u></p> <p>Specific notations, attesting accomplishment, will be made on either Form 468 and/or appropriate printed work forms for recording specialized inspection, testing and/or calibration of a component or aircraft. (See Section VI of this manual.)</p> <p><u>RECORD OF INSPECTIONS</u></p> <p>Where a record of the inspection by dimensions, tests or calibration is required by the manufacturer's technical data such record shall be made on an appropriate form properly identified with the Work Order; it must also be dated and signed by the mechanic performing the inspection, tests or calibration and/or the inspector as appropriate.</p> <p><u>RECORD OF TESTS AND CALIBRATION OF PRECISION EQUIPMENT</u></p> <p>A system is maintained on all precision test equipment that will properly identify each piece of equipment. Title: Inspection System  
Issue Date: 7/1/78

CONTROL OF PRECISION TOOLS AND TEST EQUIPMENT

Precision tools, gauges, scales, pressure gauges, ammeters, ohmmeters, voltmeters, radio, electronic, X-ray, eddy current and ultrasonic test equipment used in the repair station operations are subject to periodic checks and calibration in accordance with appropriate repair station procedures. (List equipment here and outline procedures as appropriate.)

All repair station personnel, before using test equipment, are responsible to check that the testing unit has a current calibration label attached. Any piece of test equipment found in the repair station without a current calibration label attached shall be given to the inspection department for recalibration.

TEST EQUIPMENT CALIBRATION REQUIREMENTS

Test equipment shall be calibrated at periodic intervals established on the basis of stability, purpose and degree of usage. One year shall be the maximum calibration interval. (List calibration periods on equipment list.)

Each piece of test equipment will be labeled. The label will identify the unit by manufacturer, model and serial number. The attached label must indicate the last calibration date and next calibration due date.

During the first week of each month the chief inspector will review the test equipment calibration history card file and give cards for test equipment requiring calibration to the maintenance manager and each shop foreman as appropriate. It will be the responsibility of those persons to issue work orders to repair station shops or outside contractors as necessary for the calibration of the units and attachment of updated calibration labels. After calibration, the test unit will be checked for proper labeling and the equipment calibration history card will be updated and returned to the inspection department active file.

TEST EQUIPMENT CALIBRATION REQUIREMENTS (CONTINUED)

At no time will any person be permitted to perform work on aircraft or components using test equipment which is out of calibration. The test equipment labels will be checked by supervisors at random to assure that equipment in use is in calibration. If at any time a piece of test equipment inadvertently exceeds its calibration due date, it will immediately be removed from service until a calibration check has been performed.

Standards used to calibrate test equipment must be traceable to U.S. Bureau of Standards or an approved foreign country's standards by certificate from the testing facility. Frequency for calibration standards may vary for different units but must never exceed a 12-month interval.

FIGURE 34. FINAL INSPECTION AND RELEASE TO SERVICE

Reference: FAR Sections 43.9 and 145.59(a). This should explain compliance with the rules, who performs the inspection (by title), how it is recorded, and require a check of maintenance work package for completion.

(NAME OF COMPANY) <u>REPAIR STATION - INSPECTION PROCEDURES MANUAL</u>	
Section: V Page No: 19 Title: Inspection System Issue Date: 7/1/78	
<u>FINAL INSPECTION AND RELEASE TO SERVICE</u>	
<p>Prior to approval for return to service, irrespective of the method to be used to indicate such approval, the Chief Inspector will audit the records "package" as identified by the work order, to determine that all work has been inspected as required for compliance with this inspection system and FAR Section 145.59(a). He will indicate affirmative findings approving the form per Section VI of this manual.</p> <p>When approval has been given to the above audit, either the Chief Inspector or the individual authorized in the official roster and individual summary of employment, will approve the article for return to service.</p> <p>This approval will be accomplished as appropriate to the work done, the article involved, the records available with the article, and the instructions of the customer. Care will be exercised to comply with FAR Part 43 in every case.</p> <p>Whenever the aircraft records (log) are available, record of work accomplished is expected to be made therein. This does not waive any FAR Part 145 records requirements. Neither will FAR Part 43 or FAR Part 91 be considered waived by FAR Part 145 records requirements.</p> <p>Articles such as appliances, accessories, and individual parts or components will not have an individual record to which an entry may be added. However, the installation of these items on an aircraft constitutes an aircraft maintenance or alteration, and records must be made accordingly.</p> <p>Routinely, major repair approvals will be handled in accordance with Section 43.9 and paragraph (b) of FAR Part 43, Appendix B. A maintenance release is completed as a part of the work order form at the time of approval for return to service. A separate maintenance release card will be completed and shipped on an article that is shipped to a customer. At the request of the customer (to be indicated on the work order when originated), FAA Form 337 will be completed instead of the maintenance release approval for return to service in accordance with the procedure in paragraph (a) of FAR Part 43, Appendix B.</p> <p>In all cases where major alteration is involved, FAA Form 337 will be completed per FAR Part 43.9 and FAR Part 43, Appendix B.</p> <p>APPROVED: <i>El. Mo. Suro</i> General Manager</p>	

FIGURE 34. FINAL INSPECTION AND RELEASE TO SERVICE (CONTINUED)

(NAME OF COMPANY)  
REPAIR STATION - INSPECTION PROCEDURES MANUAL

Section: V  
Page No: 20  
Title: Inspection System  
Issue Date: 7/1/78

FINAL INSPECTION AND RELEASE TO SERVICE (CONTINUED)

The authorized supervisor in whose area the repair or alteration is accomplished will be responsible for establishing that the repair or alteration was made in accordance with the requirements of FAR Part 43 and will sign the conformity statement (Item 6) on FAA Form 337.

Authorized personnel responsible for the approval for return to service of aircraft will indicate such approval by signing the approval for return to service (Item 7) on FAA Form 337. Appropriate entries will be made in the aircraft record pertinent to the repairs and alterations accomplished by the repair station. Specific reference will be made by calendar date to the applicable FAA Form 337. The original FAA Form 337 will be inserted in the aircraft record with a copy forwarded to the local FAA-district office and one copy retained with the copy of the aircraft work order.

It is the responsibility of the person authorizing return to service to assure that the aircraft flight manual is properly revised following any alteration or modification to the aircraft and that the weight and balance record has been amended as necessary.

Aircraft components, appliances, and other items, other than completed aircraft repaired or overhauled as authorized by the repair station specifications, will be returned to service through the use of a maintenance release preprinted on the serviceable parts tag described in this section of this manual. The authorized supervisor under whose jurisdiction the work is accomplished will be responsible for the release of units in the category.

No aircraft or unit may be released for return to service until the work order and other records have been reviewed for completeness and final acceptance cleared by inspection. Particular attention shall be accorded the status of applicable airworthiness directives.

APPROVED: J. M. Bass  
General Manager

2/13/81

AC 145-3  
Appendix 1

FIGURE 38. PERFORMANCE OF MAINTENANCE, PREVENTIVE MAINTENANCE,  
ALTERATIONS AND REQUIRED INSPECTION UNDER THE CONTINUOUS AIRWORTHINESS  
REQUIREMENTS OF FAR PARTS 121, 125, 127, AND 135

NOTE: This section should show how the rule is to be complied with, that the work is to be accomplished in accordance with the operator's manual and a current copy of the manual is available.

(NAME OF COMPANY)  
REPAIR STATION - INSPECTION PROCEDURES MANUAL

Section: V  
Page No: 24  
Title: Inspection System  
Issue Date: 7/1/78

PERFORMANCE OF MAINTENANCE, PREVENTIVE MAINTENANCE, ALTERATIONS AND  
REQUIRED INSPECTION UNDER THE CONTINUOUS AIRWORTHINESS REQUIREMENTS OF  
FAR PARTS 121, 125, 127, AND 135.

This repair station will perform this work in accordance with the operator's manual. The repair station will have a current copy of the applicable section of each operator's manual which contracts with the repair station for the performance of that operator's maintenance. The chief inspector will be responsible for keeping each operator's manual revised and determining that the operator's manual is current before a work order is issued.

REQUIRED INSPECTION ITEMS (RII)

Any maintenance operations which, if improperly performed, could be critical to the safe flight of an aircraft will be given a required inspection. A qualified inspector, familiar with all inspection methods, techniques, and equipment will be assigned to determine the quality of airworthiness of the article involved. When work is performed for an operator under the continuous airworthiness requirements of FAR Parts 121, 125, 127, and 135, the RII items specified by the operator will be maintained as RII items.

APPROVED: J. M. Bono  
General Manager

2/13/81

FIGURE 39. PERFORMANCE OF WORK AT A LOCATION OTHER THAN THE REPAIR STATION.

Reference: FAR Section 145.51(d). In accordance with FAR Section 145.51(d), a repair station may maintain or alter any article for which it is rated at a place other than the repair station providing certain preparations are made and certain conditions are met as required by FAR Section 145.51(d)(1) and (2). Performance standards are required to remain acceptable at such places of work. FAR Section 145.51(d)(3) requires the inspection procedures manual to contain the approved procedures governing the work to be performed at a place other than the repair station. This is a frequently overlooked manual requirement. In order for a procedure to be valid for approval it should:

1. Be described in terms understandable to those persons who are governed by it in the performance of the work.

2. Be monitored regularly so as to ensure it covers the nature of the work that may be needed outside the repair station. This is necessary as it is difficult to predict the nature of work to be done outside the station.

3. Be tailored for the particular station, the nature of work and the frequency expected. The following are items recommended for consideration:

- a. Who will authorize the work, organize the project, direct it, and who will perform the work?

- b. What type of work tasks will be required (supply, repairs, inspections, communications)?

- c. Where some of the work is to be done. It may be advantageous to perform support work on components or parts at the base repair station as a standard procedure.

- d. How will the work projects be monitored and reviewed to assure procedures are adequate and that records identify the projects for accountability?

- e. Occasional explanations within the system description of why certain requirements, controls or reports are necessary will help employees to understand and accept the system.

4. The privilege to perform work at a location other than the repair station is to be done on a temporary basis. If a permanent station is established at the location, it will be necessary for the repair station to make application for a satellite to the main repair station, or make an original application for a repair station at the location.

FIGURE 39. PERFORMANCE OF WORK AT A LOCATION OTHER THAN THE REPAIR STATION (CONTINUED)

(NAME OF COMPANY)

REPAIR STATION - INSPECTION PROCEDURES MANUALSection: V  
Page No: 25  
Title: Inspection System  
Issue Date: 7/1/78PERFORMANCE OF MAINTENANCE AT A LOCATION OTHER THAN THE REPAIR STATION

(Name of Company) will provide maintenance service for its customers on an emergency on-call basis at a place away from the repair station.

(Name of Company) can only provide this service for work for which the repair station is rated. Only the general manager or the chief inspector are authorized to initiate a work order for such work.

The maintenance manager will be responsible for assigning the personnel necessary to perform the work and appoint a person to be in charge of the work force. The chief inspector will assign the inspector(s) responsible to inspect the work and assure that all required forms and work are completed as necessary. The chief inspector will assign one inspector with the responsibility for returning the article to service.

The maintenance manager will ensure that the article to undergo maintenance and the work force will be in an area safe for the work to be performed and that they will be protected from the elements. The maintenance manager will be responsible for providing all the necessary manpower, work forms, technical data, tools, and equipment necessary for the accomplishment of the maintenance. The maintenance manager will establish a system of communications between the field force and the repair station.

The stockroom manager will be responsible for assigning a stockperson who will provide parts and supply support between the repair station and the field force. All articles removed by the field force from a product undergoing maintenance at a location away from the repair station will be routed through the stockroom parts receiving department. The article(s) will be inspected in accordance with the repair station inspection procedures and either routed to the repair station shops or to contract repair agencies as appropriate.

All personnel assigned to accomplish work away from the repair station shall accomplish the specific function of work in the same manner as when performed at the repair station and in accordance with FAR Sections 145.57 through 145.61.

APPROVED:

*J. M. Baso*  
General Manager

FIGURE 40. SECTION VI - FORMS SAMPLE COVER PAGE.

Reference: FAR Section 145.45(f). This section is required to contain samples of each of the forms used by the repair station in the performance of maintenance and the method of executing them. The instruction for executing a form may be contained on the form if it is found practical. However, if it is necessary to change any of the procedures for handling the form it would require a reprint of the form. Unless a form is judged stable, it may be more economical to provide separate instructions on a manual page. It would then be a simple task to revise the manual page to show the change.

\*

\*

1. When planning a form system, important functions to be considered are the control of operational procedures and recordation of all work performed on each article processed.

2. The number and content of the forms would be influenced by the size of the repair station, the complexity and variety of the articles for which the repair station is rated, and the needs of its customers.

3. Some factors to consider during the development of instructions for completing a form are:

a. How the form is to be introduced, (at what point in the maintenance process) and when it is to be completed.

b. The person or section responsible to start the form, who will contribute to its completion, and who will finish it.

c. How the form will be executed (what kind of information, in what form, etc.).

d. The purpose of the form, and how it fits into the system.

e. How the form will travel and what its final destination in the records system will be.

f. A system to locate and check the progress of products enroute thru the repair station.

4. Detailed inspection forms and checklists which may be used in the performance of annual or other approved inspection programs, or engine overhaul inspection sheets, need not be included in this manual. These forms should be referenced in the forms section by form number, revision date and title. The manual should contain instructions for use and a copy of the detailed forms should be available for inspection upon request of the FAA and other authorized persons.

FIGURE 40. SECTION VI - FORMS SAMPLE COVER PAGE (CONTINUED)

5. It is possible at times to develop forms that can be used for multiple operations or work. The form should have adequate space and appropriate instructions, including specific assignment of responsibility, to assure that it can be properly identified with the operation for which it was used and for recordation of work performance.

6. Forms used to record an inspection should be executed by indicating the inspection was completed, or that inspection was not required. Results of the inspection should be entered on the form or, if applicable, indicate that no discrepancies were noted.

NOTE: No examples of forms are offered since forms must be developed in accordance with the need of each repair station.

The image shows a sample cover page for a manual, enclosed in a large rectangular border. The text is centered and reads:
